

STI Valentine Dance To Be Held February 8

The annual Southern Tech Valentine dance will be held Saturday night, February 8, in the Sky Room of the Atlanta Municipal Auditorium. The dance, sponsored by Alpha Beta Sigma of the Building Construction Department, will begin at 8:30 p.m. and continue until 12:00 midnight.

The regular feature of the dance is the naming of the new "Miss Southern Tech." Each department and club sponsors a "sweetheart" and present her in the beauty contest which is held during intermission of the dance.

To qualify for the contest, the sponsoring club must pay a \$10.00 entry fee. The "sweethearts" must be between the ages of 18 and 25, single, and a graduate of high school.

The winner of the contest will succeed Donna Crowder and will have her picture featured in the 1964 Technicians' Log as "Miss Southern Tech." She will be invited to represent STI at various functions throughout the coming year.

Ronnie Millsap and his band will provide the entertainment for the evening. Millsap's band has played at many gatherings in the Atlanta metropolitan area and is well known in the entertainment field.

Tickets are \$3.00 per couple or stag. The tickets may be purchased from members of Alpha Beta Sigma. Any questions concerning the dance may be directed to the social chairman of Alpha Beta Sigma, David Redden.

Student Council Sets Class Election Dates

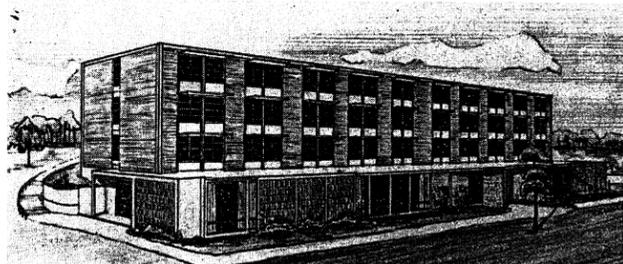

The Student Council, at its first winter-quarter meeting, set February 6 as the day for class elections. The election hours were designated as 9:00 a.m. to 2:00 p.m. The Council also decided that if a run-off election is necessary, the students will again go to the polls on February 13 to make the final decisions.

January 30 was set as the last day for petitions from candidates for the class offices.

Each year the campus-wide elec-

tion is held during the winter quarter to choose a president and a vice president for each class.

During the January 16 meeting, the Council also discussed the need for definite regulations for the qualifications of Miss STI candidates. Though not enough members of the Council were present to hold a formal vote, the members who were present did recommend that Miss STI candidates be out of high school, less than 25 and at least 18 years of age, and unmarried.

THE NEW DORM

Rendering of dorm by Professor Chester Orvold

Photo by Professor Robert Carter

Hopes Rise As Grading For New Dorms Begins

Grading for the new dormitory facilities at Southern Tech has begun. The building is being located south of the administration building by approximately 100 yards. Construction will follow the lines of the existing buildings, but the new building will be taller than any of the existing facilities. It will contain 60 units with facilities for 180 male students.

Present dormitory accommodations are entirely inadequate. Stu-

dents are housed in "temporary" pre-fabricated houses which were built in the vicinity of the aircraft factory during World War II. These structures are to be razed as soon as the new dormitory is completed.

The drawing of the dormitory shown here is by Chester Orvold. Architects for the building are Bothwell and Nash of Marietta. Construction is by T. C. Brittain of Decatur. The completion date is set for one year from now.

Calendar of Events

FEBRUARY

- 3 Young Harris College basketball game at Young Harris, Ga.
- 6 Class elections.
- 9 Sabin Oral Sunday.
- 13 Run-off for class elections, if necessary.
- 15 Georgia Military College basketball game at Milledgeville, Ga.
- 18 Norman College basketball game at home.
- 19 Columbus College basketball game at Columbus, Ga.
- 21 Abraham Baldwin College basketball game at home.
- 26-27-28-29 Georgia Junior College Tournament at Statesboro, Ga.

MARCH

- 6 Last day for dropping a subject with a "WP."
- 20 End of term.
- 21-29 Spring recess.

Southern Tech Has Two-Dollar Days

The Southern Tech Circle K Club has been trying to show the people of Marietta what an asset Southern Tech is. The members of Circle K began laying the plans for their two-dollar week some time last quarter. According to Assistant Professor William S. Newman, the club's faculty advisor, the original idea was to show where and to what extent the Southern Tech students spent their money.

The first step was to obtain some sort of easily noticeable money. The original idea was to use silver dollars, but this was later scrapped because of excess weight. New crisp two-dollar bills would be used by the cashier in making change for the students. In preparing for the two-dollar week, the school had \$10,000 set aside at the bank in two dollar bills. During the week of registration, \$6,100.00 of the new bills were dispersed to the students.

The idea aroused more interest than was anticipated, as the WSB-TV crew was on hand to take films of the event and get the story on the air. When WSB newsmen interviewed Newman, they wanted to know more than the purpose, they wanted to know the reaction of the Marietta merchants to the idea.

Newman said some of the merchants complained because they do not have a space for \$2 bills in their cash registers. But, according to Newman, the merchant who turned in \$1,200.00 in two dollar bills wasn't complaining very loudly. All of the results are not in yet, as Circle K is lacking in manpower to collect the necessary information. However, some of the merchants of Marietta need no proof when it comes to Southern Tech's value to their business. One of these businessmen is Mr. Bill Cochran, manager of K-Mart Grocery (formerly Thrift City Grocery) who said that he was already aware of the large amount of Southern Tech business that he has, and that he appreciated it very much. It was not learned how much of the new money was spent at his store.

Mr. T. E. Prather, owner-operator of the Red Star Market, said that he had taken in nearly one hundred dollars of the bills. However, according to Prather, he was unable to keep the bills for deposit in the bank because of the number of checks that he cashed.

Hunting Trip Fatal For Student

Southern Tech student John S. Black was killed while on a hunting trip during the Christmas holidays. The STI senior, who was from Rome, Georgia, was fatally injured when he was hit by a falling rock near Texas Valley, Georgia, on December 21. He had been enrolled in the civil engineering department.

Regents Approve Second Dorm

The Board of Regents recently approved the construction of a second dormitory for Southern Tech students. The building will be begun sometime in 1965, and probably will be ready for occupancy in early 1966. One reason for the delay, according to Director McClure, is that the financial plans for construction will take a considerable amount of time to work out.

Photo by Professor Robert Carter

Quizzing Machine Keeps Students Busy

After nearly two years of effort, R. C. Carter and W. E. Burton completed in December of 1963 a type of quiz machine patterned after one described by B. James Ley in the March, 1961 issue of the *IRE Transactions on Education*.

The machine is basically a quizzing machine rather than a teaching machine, but properly used, it should prove to be beneficial to students and instructors. It has holes in the panel for inserting twelve 3x5" file cards. Two of these are for instructions and ten are for questions or problems. Each question has five multiple-choice answers, and a rotary switch is used to select the proper answer. After all ten questions are answered, a button is pushed for the score. The score is displayed at the upper-right corner by neon lamps, and is shown for approximately two seconds.

If an attempt is made to change an answer during or after the score display, the scoring computer is dropped out of the circuit and a tilt lamp lights. If this happens, all switches must be returned to the off position. Also, if an attempt is made to guess, or to set the switches at random, the tilt lamp lights. Actually, this is accomplished by a timer which is set to approximately the minimum time it should take to read carefully all ten questions.

Inside, the machine consists of two etched-circuit boards, the code switches to allow any one of the five choices to be made the correct answer, counters for statistical data, and associated wiring. One of the two etched-circuit boards is the score computer, an all-relay type of multi-path computer, arranged so that no matter which of the ten questions are correctly answered, the proper score will be displayed. The other board contains the control relays, the delay timer, and the power supply.

Counters record the number of times each individual question is answered correctly, the number of times the machine is used, and the number of times each individual score is made. This will enable a statistical study of the results to determine what particular areas of

theory need additional classroom stress and to determine the progress made by the students who continue to use the machine.

The major value of the machine to the student will be in repetitive use. If each student will use the machine regularly — and will keep trying until he makes 100 on each quiz, chances are good that his reading ability and retention of the theory covered will increase. The overall result of this should be reflected by a rise in his grades and a general increase in his confidence as he progresses in his studies.

Use of the machine is not restricted to the Electrical Department, since cards on any conceivable subject may be inserted.

Students Receive \$1300 In Loans And Scholarships

Scholarships and scholarship-loans totaling \$1300 have been awarded Southern Tech students beginning with the winter quarter. According to William J. Glenn, STI counselor, most of these awards are to run through the spring quarter, though two students will receive aid to include the summer session. This amount is in addition to the \$3190 which was designated at the start of the fall quarter.

A new scholarship - loan has been set up by the Atlanta chapter of the American Society of Tool and Manufacturing Engineers. This program is restricted to those students who are qualified to become members of the STI student branch of ASTME and who have maintained good averages through at least two quarters. The initial ASTME scholarship - loan has gone to Randy Connors, Social Circle.

Other scholarships and their recipients include: Regents State—Terry McDaniel, Harlem; Marietta Kiwanis — William C. Montgomery, Chattanooga, Tenn., and James G. Young, Gainesville; Marietta Optimist — Rodney Hutchinson, Poulan; and Marietta Lions — William C. Montgomery, Chattanooga, Tenn.

STI To Be Inspected For Sou. Association Membership

Gordon W. Sweet, executive secretary of the Southern Association of Colleges and Secondary Schools, contacted Director McClure on December 13 to indicate that the Committee on Post-Secondary Specialized and Technical Institutions, after a conference with McClure in Memphis on December 1, recommended

that a Special Study of STI be made and that the college be considered for membership in 1964 as a special-purpose institution.

Word was received January 9 that a visiting team to inspect Southern Tech has tentatively been scheduled for April 12-15.

Editorial Comments

STI Spirit . . . Dead as a Dodo

Before we can solve a problem, we must first be aware of the problem and know the causes so they can be eliminated.

School spirit is a genuine concern on the part of the students, faculty, and administration for each other and for the school.

Southern Tech school spirit is almost nonexistent. Less than half of the students belong to a school club. Our athletic teams have, many times, been the only ones attending the competition, and many who do belong to clubs or athletic teams do not attend regularly.

We believe a major deteriorative influence on our school spirit is the lack of dormitories on the campus. Although this condition will be relieved somewhat when the new dorm is constructed, the lack of any campus recreation area will still be a problem unsolved. Also, when the students cannot meet as a group in an auditorium, or other central assembly area large enough to accommodate most of the student body, they cannot get to know their class officers. The administration cannot become immediately aware of student reaction to new policies and the students cannot be fully aware of the reasons behind those policies.

Lack of time also contributes to lack of school spirit. Heavy class loads and demanding courses keep many of the students so busy that they don't have time to participate in extracurricular activities as they would like. Many students are married, and many work and have heavy outside responsibilities which further complicate the problem. A large percentage of the unmarried Southern Tech students (about 1/3) live at home, and commute, and are not on the campus when many of the student activities occur.

Diverse social and economic backgrounds among the students make affable communication difficult. Departmental cliques result . . . even cliques within the departments are evident. Club rivalry often becomes spiteous. This certainly is not conducive to a united student body with good school spirit.

A lot of these problems can be solved; many of them cannot. We have presented what we feel are the major causes of lack of school spirit at Southern Tech, and we are anxious to hear any ideas for solutions from the students, the faculty, and the administration.

We need to face the fact that many of us are either unconcerned or too lazy to put forth enough individual effort to "get the ball rolling" toward better school spirit. A concerted effort by administration, faculty, and students to produce better communication, to increase understanding, and to improve over-all school spirit will solve our problem. If we work toward eliminating the excuses behind which we have been hiding, our efforts will not go unrewarded.

THE NOT-SO-WELL-SPENT DIME

Do you remember when coffee used to be five cents at the STI Snack Bar? Sometime during the early months of 1963, the price was raised to the present cost of ten cents. Some students say that the price of the coffee should agree with its quality; that is to say, it should be given out free of charge.

The Technician staff looked into this matter a little further. We found that the reason given for the rise in the price was that sugar prices had risen considerably at that time. But the sugar prices have now gone down. It seems to us that the coffee price could now be lowered at least to the original cost of five cents.

Georgia Tech's coffee costs ten cents per cup, but we can see no reason to mimic this action.

We hope that our letters and comments on this subject will be taken seriously by the non-profit snack bar.

BE SURE TO BE THEIR (THERE)

We have noticed several posters and bulletins on campus with atrocious spelling. This is a technical school, and we are not expected to be literary geniuses . . . We are, however, expected to know how to spell.

Visitors, alumni, and University of Georgia students are on campus nearly every day, and they see these posters and notices on the bulletin boards. Why should we advertise our weaknesses to these people in large bold-faced print plastered all over campus, when a dictionary is so easy to use?

EXPULSION FROM STI

Two members of the student body cheated on a final examination last quarter. They were permanently expelled from Southern Tech — and rightly so, we on the staff of the Technician believe. This is a stigma which these two individuals most certainly will carry with them the rest of their lives. But it is also a shameful occurrence to the whole of STI. We despise any manner or form of cheating and hope that such an act of stupidity will never occur again on this campus. It is hoped that students entering STI will be motivated enough so that cheating will never be a part of their Quest for Education.

THANKS TO DONNA CROWDER

The reign of "Miss STI of 1963" is almost over, and it's time to pay tribute to Donna Crowder for her excellent job as our representative. The position as "Miss STI" is not just an honorary one: Work is involved! Donna represented us on radio, in parades, and on various other occasions. To accomplish these things, she took her own time away from her family. We can say thanks to a very pretty "Miss STI."

Letters To The Editor

Ed. Note — Letters to the editor should present problems or comments pertaining to the student body. Solutions to the problems are desirable in each letter. Letters should be fair and logical; names will be withheld if the writer desires.

Editor:

Recently it was brought to our attention that the students who do not participate in departmental organizations do not have a voice in the Student Council. Many suggestions have been made to remedy this condition. One was that the class officers represent these students. Another was that Tau Alpha Pi and Circle K combine and elect a representative.

We the members of the Circle K would like for the student independents to express their ideas on this subject to the Editor of The Technician in the form of a letter.

Sincerely yours,

Members of Circle K

Editor:

Can anything be done about the sudden invasion of giant gophers that has caused much damage to our till-now beautiful campus? Most of the destruction has been the defacing of our new olympic-sized marble ring complete with concrete knee pads. Although several months were required to build the ring with the correct contour and acceptable carpet of grass, we have been so careless as to allow these burrowing creatures of the soil to excavate their places of habitation in our hallowed marble ring. I wasn't aware of any threat to our athletic grounds until this quarter. Upon returning to school from the holidays, several large holes in our mound were quite noticeable.

In an effort to save our facilities, we could do possibly two things:

1. Place at certain strategic points some indication that these grounds are not to be used as an outdoor privy by some rodent individual not familiar with the convenience of metropolitan life.

2. Perhaps we could discourage the activities of these unruly characters by filling up their domiciles with the seemingly plentiful supply of concrete supplied by the Physical Plant for their landscaping program.

Do we have any adventurous students who would like to join me in my battle to save our marble ring?

Jimmy Meeks

DON'T FORGET

STUDENT ELECTIONS

FEBRUARY 6

SNAPSHOTS NEEDED!

W. D. Koempel, editor for the 1963-64 LOG, is in the process of gathering snapshots of club activities for several pages in the LOG. Clubs having interesting pictures should bring them to Room 265 or send them to the editor, Box 8221 as soon as possible.

Editor Koempel states that anyone interested in working on the LOG staff may see Professor Blair in Room 265. He adds that the greater the combined student effort on the production of the LOG is, the better the results will be.

Editorial Comments Continued

PARKING LOT BANDITS

We understand there has been some stealing going on in the parking lots . . . particularly the large lot in front of the school. The campus policemen are making a concentrated effort towards catching the ones responsible for the thefts. We can discourage some of this stealing by locking our cars . . . especially if we leave anything of value such as books, slide rules, and drawing instruments in sight.

Give The Class Officers Something To Do

Class elections will be held on Thursday, February 6. Many students from each class will vote for a president and vice president. Up to now these offices have been only honorary ones. The official duties of these campus representatives have been, at best, a little hazy. We would like to see some responsibilities spelled out for these people.

We suspect that the fault has been not in the selection of the presidents and vice presidents but the lack of power, the lack of voice, and the lack of participation in campus affairs that these have traditionally carried with them into office.

Thus the president and vice president of each class have been voiceless creatures because they have been hindered by the present structure of student government.

In order to change this, we recommend that the following responsibilities be established. Each class officer should

1. be given a vote in the student council,

2. be given an office in the student council (at least for the presidents of each class),
3. be duly sworn in office by the Director of Southern Tech,
4. become a sort of ambassadors-at-large, representing STI at community functions, if opportunities arise, such as luncheons, dinners, etc.,
5. escort "Miss STI" when she is on campus or at community affairs,
6. be available to the administration for announcements that would affect the student body,
8. have at least a 2.5 average,
9. meet with the Director from time to time to discuss student matters,
10. have a part in the presentation ceremony of "Miss STI,"
11. become aware of student problems by conversations with the students themselves.

How To Maintain An Intellectual Appearance

by a. d. monishment

There were so many favorable comments from students who tried my "How to Study" advice with good results that I felt my infinite experience from many years of trying to graduate from this institution could be useful to them.

In this issue I will cover the subject of intellectual appearance on the Southern Tech campus. After a student has carefully applied a successful study technique, the next most important thing is to appear intellectual to his instructors. After all, if the instructor can't see the obvious results of my study technique on quizzes, then his recognizing student knowledge (or apparent student knowledge) by coming in actual contact with the student is the next best way for the instructor to pass you.

Use big words in your conversation. Memorize several of them out of a dictionary each day; then drop them in your sentences to impress everybody. Using the word correctly is not even necessary. If the instructor knows what the word means (more than likely he won't) he won't be impressed by it anyway and if he doesn't, who's to know the difference?

Glasses contribute immensely to an individual's apparent intelligence . . . especially the kind that magnify your eyes. If the lenses blur your vision, hold the spectacles by the ear hook, with the hand you're not using to draw doodles, and swing them to and fro. An occasional furrowed brow and a thoughtful nibble on the earpiece of the glasses make the act more convincing.

Remain in class several minutes after the dismissal bell rings and ask a lot of irrelevant questions so the instructor will think your scope of knowledge is much larger than it really is. Avoid questions directly pertaining to information given in class, because you may embarrass the instructor by hitting on a subject that he doesn't know anything about.

THE CAMPUS ROAMER

By Steve McKinney

Recently, the point averages for the "Dean's List Students" were published. Since these averages ranged from 3.00 to 4.00, many students have remarked, "I don't see how anyone could do that well; I wonder how they do it?"

To answer these questions, several students who had a 3.00 average for at least two quarters were interviewed. In order, these were the basic questions asked of these Dean's List Students:

1. How much time was spent studying per week?
2. How were notes taken?
3. Where was the studying done?
4. Was a radio used while studying?
5. How much work was done on weekends?
6. What recommendations could be given to students who are having academic problems?

Grady Harbin
E.T.

Marietta, Georgia
Point Average: 4.00

"Usually I spend at least one hour or more a day on each subject; and my total time per week, including weekends, averages about 38 hours.

"I try to cover material at home before it is covered in class and take notes on the material. When the instructor goes over the material in class, I take notes on his lecture and combine my notes with his notes for a complete set. I write all formulas and important definitions in ink and general things in pencil.

"I have a certain place to study away from all noise. It is good to get away from distractions because I think that it is important not to be disturbed while studying, because once interrupted, it takes about fifteen minutes to get back in the frame of mind to study.

"I like to be fairly comfortable, but not so comfortable as to go to sleep. I have tried to read lying down, but it does not work.

"Up to this quarter, I worked at a hardware store; however, I work for my father now.

"Too many people do not have their minds made up when they begin college. They do not realize the importance of an education and therefore do not study enough. I believe anyone who takes good notes and studies hard should be successful at Southern Tech."

Orian T. Gloer
Mech.

Forest Park, Georgia

Point Average: 3.2 Overall

"Time per week — 4 hours each night, 35 hours including weekends. I underline the main object of each topic in the text and lecture notes and make a mental summary of material covered. I ask myself questions verbally.

"Above all, I'd recommend that a student get interested in the subject and try to see its purpose in the entire picture of his course of study.

"These are some study habits I'd suggest for students:

1. Keep up; don't get behind. It's easier to keep up than to catch up.
2. Make a careful review but don't cram.
3. Take in a movie or some form of relaxation before a big quiz.

"I do not study with a radio. I own a small trailer which I have parked in my back yard. I always study in the trailer because it is quiet and I get a lot done.

"As for recommendations:

1. Set definite goals that you want to accomplish.
2. Know where you are going.
3. Believe you can achieve these goals.
4. Make time schedules for studying."

Charles E. Sizemore
E.T.

Climax, Georgia

Point Average: 2.9 Overall

"The time I spend studying depends on the subject. Some require more time than others. My time averages 20 hours during the week, 6 hours on week-ends, total time 26 hours.

"I take all notes the teacher

gives and try to understand them later when I study. Complete notes are essential. A lot of quiz questions come from side comments that seem unimportant. I study a little ahead, according to the subject and how much it arouses my interest.

"I study at the same desk, but studying at the same desk doesn't have a thing to do with it. I always sit up unless it is some reading material, but it isn't too effective some times if I lie down. — Radio, definitely not!

"I do not work on week-ends.

"First be sure you are in the right field. Try to understand the fundamentals of the course and get the teacher to help you and/or someone else who is qualified. If you don't grasp the basic fundamentals, you may well be lost, because from the basic fundamentals, you get an applied application. On quiz days only study that necessary subject so as not to clutter your mind. One must find a way to arouse his interest in a subject to do well. Try to associate the fundamentals with something you will be able to use after graduation."

Kenny Carreker
Mech.

Rex, Georgia

Point Average: 3.2 Overall

"I spend about 16-17 hours a week in studying. I have always gone by the policy of paying very close attention in class, and I take notes on the essential things the Professor tells. I believe one can learn more from the instructor than the book by taking notes on what is said. However, it is also essential to study some at home. I believe that the closer I pay attention in class the more it cuts down on studying time.

"I do not work on the week-ends for any certain company; I guess one could say I am in business for myself. I do all kinds of repairs on cars during the week-ends.

"I never listen to the radio when I am studying.

SOUTHERN TECHNICAL INSTITUTE

DEAN'S LIST—FALL, 1963

REQUIREMENTS—

- 3.00 or better average
- At least 15 hours of credit work
- No failures or incompletes
- No conduct offenses

What's New and Worthwhile

MOVIES

The Easy Life, The story of a staid, dull, law student who suddenly finds himself wrapped up in the excitement of a gay, fast life — but at the mercy of his "devil may care" companion.

Love With the Proper Stranger, A humorous story about a not too humorous situation — the girl in trouble. Good performances by Natalie Wood and Steve McQueen.

Love on a Pillow, The latest effort by Brigitte Bardot. If we said the picture was lousy, you would probably want to wait and see for yourself. So, we'll say simply that this picture is a sort of *tour de force* of the BB epidermis.

Charade, a rapid-moving, "who-dunit" movie starring Cary Grant and Audrey Hepburn. Murder, intrigue, \$250,000 hidden on the face of an envelope, and a rousing sound track make this clever movie one of the best offered in the Atlanta area.

BEST BOOKS

Fathers to Sons, a collection of letters edited by Alan Valentine.

Don't Knock the Corners Off, by Caroline Glyn. She is only fifteen years old, but this young lady is a polished writer. The novel is about English school life.

The Venetian Affair, by Helen MacInnes. A light, fast-moving international thriller.

Kathy's Advice to Lovers

Dear Kathy,

I have a very serious problem with my boyfriend. He is a student at the North Avenue Trade School for Boys. He always comes to my house at meal time and spends every night there drinking my father's beer and watching TV. We have not been out anywhere since our first date. He says that going out is for jerks that don't know how to enjoy the finer things of life, such as my TV and my father's beer.

However, my main problem with him is his sloppy appearance. He never shaves or bathes except on special occasions like his birthday which is February 29. I gave him a bottle of deodorant for Christmas, but he just drank it. As you can see, my problem is a grave one. Please help me.

Worried.

Dear Worried,

Do not feel alone with your problem. There are over five thousand students at the North Avenue Trade School for Boys, and every young lady who dates these boys has the same problem that you have.

You should not waste your time trying to reform your boyfriend. Give him a math problem that is nearly impossible to work. The math problem will keep him busy for years, and during this time you can spend your time more wisely. There is a Technical Institute north of Atlanta in Marietta, Georgia, where you would be able to meet many young scholars who are also gentlemen. After meeting one of these gentlemen, you will never even remember your old boyfriend's name.

Kathy.

TENSION?

Is the pressure of going to college too much for you? Do you have eight hours of work and only one hour of time? Does the dorm room you live in get on your nerves? Here are some recreational, emotion-stabilizing steam blowers to help you out:

1. Target practice on the roaches with a 45-caliber pistol.
2. Lather the floor with soap suds, find a large piece of cardboard, and ski.
3. Connect a "cherry bomb" fuse to your roommate's desk-lamp filament, and wrap a bag of ketchup around it.
4. Kiss yourself in the bathroom mirror.
5. Invite a cow into your neighbor's apartment.
6. Park the dorm supervisor's car in his kitchen.
7. Steal the Epsilon Pi Chi bell.
8. Make cigarettes from dry leaves and old rubber bands. Sell them for extra cash.
9. Make wine out of all the roaches you killed with your pistol.
10. See if you can tell the difference between your wine and the Snack Bar's coffee.

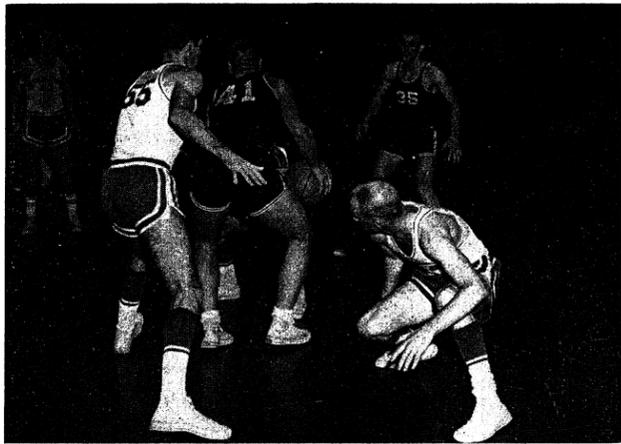

Got A Ringing In Your Ears?

Some colleges have bugles, some drums, some lions, tigers, bulldogs, or goats; Southern Tech now has a 70-pound bell.

The bell, owned by Epsilon Phi Chi fraternity, has been hoisted into the stands at Larry Bell for the recent home basketball games. It takes at least two people to carry the thing, says W. D. Koempel, the fraternity president.

The reason behind it all, the fraternity members say, is to support the team with a lot of noise. They decline to say just where the fraternity got the bell.

One thing is certain — STI fans should remember to bring ear plugs to the games.

"Nix it! The ref' is Watching" Photo by Bob Bailey

Jordan Breaks Scoring Record

Southern Tech forward Robert Jordan has broken a long standing scoring record this season and has a slight chance to break another.

On January 4, against Augusta College, Jordan scored 40 points to erase a twelve-year-old, single-game, scoring record of 37 points set by Charlie McDaniel. McDaniel set the mark in the 1952-53 season.

Jordan, in fifteen games this season, has scored 333 points. The sea-

son record of 564 is held by Donnie Smith who starred with STI in the 1956-57 season. This year's team participates in fewer games than the team of the 1956-57 season did, so Jordan will have to increase his per game output by nearly eight points in order to break the record.

Bob McCoy trails Jordan in scoring with 246 points. His average per game is 16.5 points, based on fifteen games.

Season's Record Tells Only Part of the Story

By Steve Dean

As the dawn of Monday morning, January 27, came, Coach Harry Lockhart could have said, had he been asked, that Southern Tech Green Hornets have developed into a pretty good basketball team. Though the season's record was only 7 won and 8 lost, statistics seemed to indicate that the team has had a good year. In the fifteen games that were played to that time, STI had out-

scored opponents' 1030. The STI cagers thus had out-scored opponents in per game tabulations by 72.1 points to 68.5. Second guessing never has improved situations any, but if the Truett-McConnell game (64-67) and the Brewton Parker game (51-56) had contained a few more breaks in another direction . . . Well, it would have been a winning season, at least on the morning of January 27.

Season Basketball Scores

STI Score	Opponent Score	Opponent
74	56	Southern Tech Alumni
80	62	John Marshall University
78	57	John Marshall University
69	77	Middle Georgia College
77	96	Truett McConnell College
69	78	Georgia Southwestern College
72	79	North Georgia Vocational School
75	74	Augusta College
78	85	Augusta College
64	67	Truett McConnell College
68	61	Armstrong College
50	70	Young Harris College
51	56	Brewton Parker College
95	47	North Georgia Trade School
80	64	St. John's River College
100	95	Gordon Military College (Two overtimes)

Part-Time Jobs For Students

Mrs. Simmons is currently putting on a drive to obtain part-time employment for students who need to help pay their college expenses. In addition to the arranging of interviews with graduating seniors who are seeking career employment, she is soliciting local industrial firms.

Mrs. Simmons is trying to obtain part-time employment for students who need to help pay their college expenses, in addition to arranging interviews with graduating seniors. "The main responsibility of the Placement Office," states Mrs. Simmons, "is to bring together graduating seniors and employers who want career engineering technicians." She also states that many of STI students have sought help in obtaining part-time work while in school, and for this reason, the Placement Office maintains a job roster for those firms who list positions with STI.
