NO. 7

Draft Bill Passes Congress; All Junior College Students To Be Drafted

Bulletin

An announcement released by the Gulitex Oil Co. simultaneously with the state highway authority's decision to reroute I-75 through the campus of Southern Tech has created pandemonium on the campus.

Gulitex announced that it had purchased building rights adjacent to the highway. Construction on the new service station is to begin within a month, according to the Gulitex statement, which said that construction should progress rapidly after the removal of a large rock on the property was accomplished. The statement expressed confidence in the rock removal because it seemed to be nothing more than a surface rock.

When news of the destruction of the rock leaked out to the student body, pandemonium broke loose. The students, banding together in a protest effort, marched (cont. p. 20, col. 4)

I-75 Will Be Re-Routed; To Intersect STI Campus

Sgt. Richards announced today that he had been informed by the state highway Authority that the route for I-75 had been changed. The authority informed the chief that Southern Tech lies exactly on the location of a future Lockheed exit.

The authority stated that although some of the campus buildings would have to necessarily be torn down, not all the buildings would have to go. The ill-fated buildings listed by the authority to be demolished include the number one dormitory (wherein is housed the much-beloved cafeteria) and the goat shed (known to some as the administration building).

1-7 ENGINEER
(Unidentified)

Because the school was built by state funds, the surviving buildings will be allowed to remain on the right-of-way, the authority stated. When asked about student safety on a campus criss-crossed with superhighways, the authority said there were two alternatives that were now being discussed.

The first alternative is to build elevated cross walks between buildings that would give the students safe walkways to classes. The other alternative, introduced as a budget cutting step, would be to issue each student a pair of track shoes. The alternatives are being debated on capital hill, and will be released on March 33rd.

Point Average Inversely Proportional To Changes In Our Temperature Says Benning

Associate Professor Ara G. Benning, Acting Head of the acrobatics department at Southern Technical Institute, this week released his most recently published work entitled, "The Definition of Student Activities with Mathematical Formulae." The publisher of Benning's new book, DeFunct and Sons, expressed great enthusiasm for the new book.

Publisher DeFunct stated, "Benning's new work should be especially appealing to the student because it reveals concrete methods for the student to understand, and there-

probably the most outstanding contribution to the science of mathematics in recent years, Benning's work is unconventionally based on the belief that social problems can be quantitatively analyzed. The most profound example of this belief is Benning's formula relating the scholastic point averages achieved by students and the change in atmospheric temperature.

Benning had noticed that during every spring quarter of the school year, students' point averages seemed to drop below those of the other three

there existed a definite quantitative relationship between this drop in point averages and the corresponding rise in temperature. After several years of research, he proved his belief to be correct by formulating the following relationship:

$$\Delta P = K \times \frac{\Delta T}{Q}$$

P is the change in point average; T is the change in temperature; LQ is the quarter-hour load carried by the student; and k is the ratio of the student's aptitude score to his available money in dol-

Campus Cafeteria Franchise Is Awarded To MacDanold,

Resident E. D. Harris of Georgia Tech yesterday announced that the franchise for campus cafeteria rights at Southern Tech has been won by MacDanold's Burgers, Inc. MacDanold's overbidded the present franchise owner by an amount large enough to sway the Board of Regents.

Resident Harris, speaking for ten minutes said, "We believe that MacDanold's can supply a better menu at a lower price than can our pre-

doubtedly, that the students will be well pleased with our decision."

A statement released by MacDanold's stated that the company planned to offer their present line of food products to the students at a lowered price in addition to a well-balanced meal three times a day, including weekends, on a pay-as-you-go basis.

The new franchise holder
