MISS STI CROWNED AT ANNUAL VALENTINE DANCE

Students (?)—"rock" to music by the Gentrys

Miss Margaret Gallman was crowned as Miss STI for 1968 at the annual Valentine's Dance Friday night, February 16. Miss Gallman, from Marietta, represented Alpha Beta Sigma in the competition for the title. Alpha Mu Sigma representative, Miss Brenda Davis, was awarded the first runner-up position and Janice Shepard claimed the second runner-up award for Sigma Chi Tau.

Other representatives and sponsors were: Debbie Mason for the *Engineering Technician* and the *Technician's Log*, Joan Ivey for WSTB radio, and Elizabeth Carson for Epsilon Pi Chi.

Judges for the contest included several distinguished business leaders from the Marietta and Atlanta area. Chairman of the committee was Col. John W. VanHoy, of the STI fa-

Margaret Gallman, Miss STI—1968

The annual Valentine's dance, sponsored by Alpha Beta Sigma, was held Friday, February 16, at the Peachtree Garden Club on North Ivy Road in Atlanta. Advance tickets for the dance sold for \$4.00 while door admission was \$5.00. The Gentrys provided music for the occasion and the evening was highlighted by the crowning of Miss STI. The Miss STI contest and the Valentine Dance are usually joint occurrences. Professor Al Hunkin of the Southern Tech English department acted as master of ceremonies.

The Alpha Beta Sigma members were in charge of all planning for the dance: Craig Nixon and Tommy Wright were in charge of general supervision, Robin Millard and Doyle "Deacon" Jones headed up the advertising committee, Joe Coombs and Jerome Barnes were in charge of tickets, while Jim Porter and Larry McDonald handled concessions.

According to one member of Alpha Beta Sigma, "... the dance has always been and will continue to be one of the most exciting events of the school year at Southern Tech."

Western Electric Places Exhibit

Western Electric Company, manufacturing and supply unit for Bell Telephone, placed a communications exhibit in the STI Administration Building on February 19. The event was part of a joint celebration of National Engineer's Week. The theme for this year's celebration was "Engineering for World Health."

High school and elementary school students, along with the general public were invited to observe the exhibit which was open daily through the closing date, February 24.

Council Elections Set For February 28

Election for members and officers of the student council is scheduled to take place Wednesday, February 28, 1968. According to Election Director Larry Sapp, the class officers shall consist of a president, vice president, and secretary for the Senior class and a president, vice president, and secretary for the Freshman class. Each campus department shall send two representatives (a freshman and a senior), and two representatives will also be elected for the dorms. The dorm representatives may be either freshman or senior.

To be qualified for membership on the council, a student must have an overall average of 2.00 or better, and have no record of permanent offense.

WSTB OFFERS TOP 40 PROGRAMMING

Hall of Hits Survey
Published Weekly

Southern Tech's campus radio station, WSTB, is now in its second year of broadcasting. Original operations were in a study room in dorm two. Broadcasting now takes place from a temporary location in the classroom building.

One of the newest features of the station is its new Top 40 format. All shows from 6:30 until 11:00 p.m. feature the current sounds of the nation. A survey sheet is printed each week by the station's program and business departments. These surveys designate the top ten hits of the week plus the WSTB "Sure Shot of the Week."

One of the major problems the station faces is procurement of equipment. The existing equipment has proven to be satisfactory for the type of broadcasting that must be used now. With the arrival of FM transmitters though, certain standards in the audio and phasing equipment must be met before the station can legally go on the air. The other problem facing the staff is one of lo-

culty. Other members were: Mrs. Anthony Norton — an Atlanta real estate consultant, Miss Jo Ann Bradham — a professor at Agnes Scott College, Lt. (J.G.) John Blakely of the Ga. Tech Navy ROTC Unit, and Mr. Knox Woodhead,

head cashier of the Cox Exchange Bank.

The event was planned as part of Alpha Beta Sigma's Valentine Dance, and was under the supervision of Jim Porter—1968 chairman of the Miss STI contest.

Placement Statistics Compiled

Southern Tech's placement office has published its latest Alumni Salary Survey for summer, 1967. The report is rather detailed, breaking the data down in departmental and annual figures.

Questionnaires were sent to 4,088 alumni. This includes all graduates from the first graduating class in 1949 through the spring, 1967, graduating class. Of the 4,088 questionnaires sent to alumni, 1,290 were returned to the placement office, giving a 31.6% response.

The survey tabulates, for each graduating class, the number of alumni replying to the questionnaire, the high and low starting salaries for each class, and the average starting salaries for each class. The survey also gives data under similar headings for the present salaries of all reporting alumni. These data are grouped separately according to the department from which the alumni graduated.

In a separate table, the survey lists the mean starting salaries and the mean present salaries of all graduates, regardless of department. This information will be released in the March *Technician*.

Post Office Reports Damage

Several mail boxes in the Southern Tech post office were damaged sometime on the night of Wednesday, February 14. According to W. F. Collins, Southern Tech's postmaster, someone smashed the glass windows on the boxes and bent the metal framework extensively. It was not determined whether or not any mail was taken from any of the boxes or if any other damage occurred.

Collins warned that tampering with post office boxes is a federal offense and that anyone caught in such an act could be subject to punishment by law.

EDITOR'S NOTES

GREG McCLURE

The year 1968 marks a milestone in the history of STI. Twenty years ago the Institute that we know as Southern Tech began classes at the site of an old army barracks in Chamblee, Georgia. As the curriculum and faculty of the school progressed, more and more students enrolled. Finally, in 1961 the Board of Regents and the Georgia Institute of Technology, in a joint effort with civic leaders of Marietta, moved STI from Chamblee to the present location in Cobb County. But why bother recalling STI's anniversary?

During the past month I have thought about this question and have decided that something must be done this year to make the public aware of Southern Tech's purpose, and of what it can do for enthusiastic young men and industry. First of all, STI must be clearly distinguished from vocational schools. Industry realizes the difference between the two schools. The public, however, needs to be enlightened on this difference. The cold fact, whether or not we want to face it, is that STI is slowly losing out to the remote liberal art schools because potential students are afraid of being labeled as a trade school student. One of the things we are lacking here is a *well-rounded* night school program. I don't really see how one can call a five class-a-week session a night school. On the average, an STI night school student is capable of carrying 2 or 3 subjects per quarter due to the way classes are scheduled. In the vocational schools and junior colleges however, nearly all the daytime subjects are offered every night during each school week. It is plain to see then, why our night school enrollment is so skimpy. An overall revision of the night school program would probably yield much higher enrollment in both the night and day sessions.

Secondly, what are we doing about public relations? How widely are we advertised? Is the public aware of the important accomplishments of STI? Half-hearted efforts by the faculty and students in the past have presented what we call *Technician's Day*. Preparation for this day creates griping and other grievances that somehow just seem to spoil the effect of even having a *Technician's Day*. We *must* realize that if anything is to be accomplished in any phase of work, the persons involved must work together.

I would like to challenge students and faculty to think about a drastic situation — suppose the enrollment keeps dropping quarter by quarter. Soon there would not be enough students to demand particular subjects, and instructors would not be able to carry a full load of classes. Both students and faculty members would feel the results of this unfortunate circumstance.

I would like to make another challenge; a challenge to *all* of us to examine ourselves and consider our particular reasons for being here then decide if we are fulfilling them.

Twenty years of preparing students for the world is quite a span of time. Let's not stop here though—we have the next twenty to think about.

Dorm Becomes Frat House
- Un Kappa Fifth -

a. d. monishment

The dorms better stop prancy tancy prancy around and start constructing new ideas about our future conditioning. The living quarters on little bitty STI are becoming unbearable. The poor fellow who wants to study, sleep, and live a NORMAL life doesn't have a chance. The cling-a-ling 6 o'clock guys do the best they can in keeping the habitation groovy, but when gloom comes in, man its a crash pad. At dusk instead of crashing out, baby you ARE crashed in. If you look out into the metro, you'll see Santa Claus walking down the way; and that water. I wonder what happened? I told him he'd

better turn his faucet off next time. Basically, the same things happen in the dorms as usual. We inmates still take our midnight nip and get our drags on those same little Omega Pi Mu weeds before turning in. But now we've found a way to get the mattresses and springs in on the whoopee, too. I wonder if—nah, sleeping ain't possible. Anyway I don't believe in loving all the way in.

But you know, I'd like to study once-in-a-while and accomplish something worth the time I'm spending here. Flower power every night gets just too sweet. TOOOO sweet, yeah. And everybody

in the Goatshed better tell these sassy boys over here to please leave me alone, 'cause man I ain't found myself yet.

All I want is freedom, yeah man it's groovy. The brass evicted one of the nicest mothers I've ever had. She was charming. Lover of peace, it's a nast that they cut the power of HER flower.

I better look under my sheet and get some acid.

GOATSHED, GOATshed, Goatshed, I'm calling you. I'm calling you. Answer ANSWER, ANSWER. groove me hunny and STRAIGHTEN THIS PLACE OUT, including the priviledged characters.

Concrete and Litter

PHIL HALL

Sidewalks are for walking: Trash recepticals are for litter.

Sidewalks connect every building on our campus, but they aren't used, why? Even though the shortest distance between two points is a straight line, we, as students, and teachers, do not obtain the right to destroy the grass on campus by cutting pig-trails from one building to another. We cannot even be satisfied with one new path between the buildings, we make three, four, and sometimes even five new paths.

Sidewalks and pigtrails,

however, are not the only thing we need to improve on. The "UNUSE" of trash recepticals is the most unexcuseable of all destruction done to our campus, simply because it is so easy to use the trash containers, it does not even take a college education.

I am not pointing the guilt-seeking finger at anyone, but I feel both students and profs are responsible for the mutilation of our beautiful grounds.

Our maintenance men work hard to keep our grounds green and clean. We

should offer a little help by staying off the grass and using trash cans.

We must realize that the appearance of our campus reflects to visitors our lack of self-discipline, our lack of responsibility, and our lack of self-respect.

With a little cooperation on the part of all students and faculty members at STI, we could easily have the most beautiful campus in Georgia. Let us strive to make our campus a better and more pleasant place to live, work and study.

FACULTY ADVISOR—Alfred J. Hunkin

HEY FRED! LISTEN TO THIS ARTICLE IN THE TECHNICIAN. ACCORDING TO DEAN MADDOX, THERE HAS BEEN A MISUNDERSTANDING AS TO THE DORM ASSIGNMENTS OF A LARGE NUMBER OF NEW STI. COEDS. SOME COEDS FOUND THEIR ROOMMATES TO BE MALE STUDENTS AND QUICKLY REPORTED BACK TO ADMINISTRATION FOR ROOM CHANGES. HOW 'BOUT THAT FRED? ... FRED?

Southern Tech Forum

Dear Editor,

I would like to wish you a very successful year to come. I'm sure you take great pride in the effectiveness of your job and will set a good example for all Southern Tech students to follow. Your success will depend largely upon the cooperation of the whole student body. I think we, as students, should make suggestions to the editor and to the faculty.

This is my second quarter at Southern Tech and there is only one fault that I have found in the school. This centers around the book store. I will explain by giving you my experience. I work in the day from 8:00 a.m. to 5:00 p.m. My place of employment is seventy miles from Southern Tech. There is no way for me to get to the book store before it closes, therefore I find it hard to get the necessary supplies for my studies. I think the **Engineering Technician** should take this problem up with the personnel of the book store or with the officials of Southern Tech. I'm sure many students suffer this inconvenience. I think the book store should be open until 6:00 p.m. at least one night each week.

I would like to urge my fellow students to express their views on this problem to the editor.

Jerry Stowe

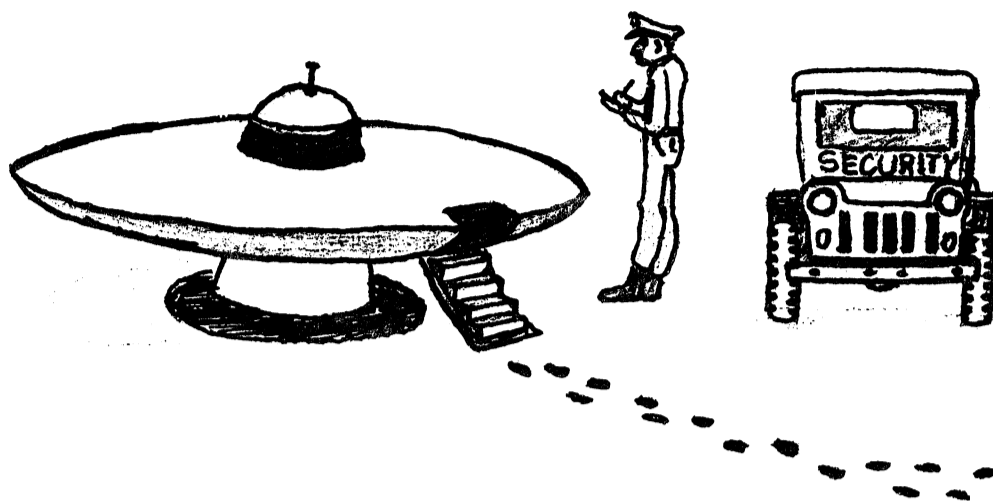

I believe several other students are having this same problem. Perhaps something can be done about this in the near future. Ed.

The Editor:

The Selective Service Laws, many of us will agree, are very unpopular at such a time when our country is engaged in war. Most young Americans would find serving their country an honor if it were not for the honorless way that their country sometimes treats them. This war in Vietnam is, in the eyes of many, a political pull for power among many nations and at present a humiliating situation for the American public, a situation with serious obligations which we are paying dearly to keep, both in manpower and in respect in the eyes of the rest of the world.

This Vietnam conflict is, in my own opinion, a situation into which we fell while dozing happily, so sure of our power over the rest of the world, we have, in the last several years suffered a rude awakening when we see the young Americans dying in a foreign land for a war which the American public does not support; a war in which we can gain little but lose much. Indeed, we have already lost much. In time, money, and man power we are losing, but more than that, in the eyes of our allies and the rest of the world we are losing respect. We are only playing at war and losing because we do not take it seriously enough. We should stay and fight wholeheartedly or get out once and for all.

Sincerely,
Jim Davis

Dear Editor,

Although Southern Tech is a technical school, and as a result it's student body is predominately male, I feel that there should be programs started that would make females more a part of campus life. This does not have to be only in the form of week end dances, but it could be the results of planned activities with predominately female colleges. These activities could be in the form of debates, movies, and other social functions.

Constant Reader

This is a sad situation, especially for students who stay on campus during the week-ends. There is not much the school can do to alleviate this. Someone has suggested a student center: any other ideas? Ed.

Dear Editor,

I would like to comment on the outstanding way in which the **Engineering Technician** has been published in the past, and I am sure you and your staff will do everything possible to keep up the fine work and possibly improve the newspaper.

The only problem I have found at STI concerns the book store. I believe something should be done about keeping the book store open at least one night a week in order to accommodate the evening school students. Those of us who work during the day do not have a chance to buy the books and other supplies we need. I believe many students would profit from this solution.

Thanks for a fine student newspaper.

Wayne Grimes

Thank you for writing; I believe that you, Mr. Stowe, and the other night students should get together and try to alleviate your problem with the bookstore. We will help any way we can. Ed.

Dear Editor,

After spending four years in the Air Force and having numerous instructors with very little teaching ability, it is refreshing to attend a school which has instructors that can teach the required material clearly and concisely.

However, there are one or two instructors who seem to spend more time griping at the students than presenting the lesson. These tactics tend to discourage the students from asking questions about items they don't understand clearly.

Most of the students at Southern Tech are here to learn, not to be insulted in front of classmates.

A Reader

Dear Editor,

Since attending Southern Tech I have enjoyed the basketball games, but in a school this large and well equipped there should be a variety of other sports. I am always hoping to see a little more activity in other sports such as Judo or handball or any other.

This newspaper would be doing the students a service if it helped to promote a larger interest in other sports.

D. A. Christophers

Our new Sports Editor noticed this deficiency so he really brightened up this issue with all the sports news available. Ed.

Dear Editor,

Congratulations on your new job. I trust you will keep up with the fine tradition of the paper. I am sure you will publish many great issues.

I have a few suggestions which you might consider for the paper: a political cartoon or a political essay could prove to be very interesting. Possibly one issue could have a brief history of the school; or a list of graduates who have become leaders or very great successes in life. These are a few suggestions which aren't really all that original but they might be interesting.

K. W. Finch

Dear Editor,

A school newspaper should reach the entire student body. On the occasions I have had to read the **Engineering Technician**, I found that it had very little for the night students. There are very few activities the night students have but I believe some mention should be made, even if it is "The Night Classes Are Still Meeting". We are a large group in the school's enrollment and I believe we should be more noted.

We also have a very limited chance to see the school paper. Some provisions should be made to get the paper to more night students.

Thomas J. Wood

I can understand your situation. In order to keep up on all that happens in night school we must have a volunteer reporter. Be sure to read my editorial in this month's issue of the paper. Ed.

Dear Editor,

To graduate from night school at STI requires approximately three times as long as day school. This hard, cold fact is apparent to many "old timer" night school students like myself.

The problem is inherent to a system which is built around two, three, and four hour courses. A night school student at STI does very well if he averages two courses per quarter. At this rate it will take approximately five to six years to graduate. Add one or two years to this and a student could have his Masters degree from a college which offers predominantly five hour courses.

There is no easy solution to the problem. One thing which would help reduce the time required for graduation would be to expand the night school curriculum in an effort to make it easier for a student to average three courses per quarter.

James J. Smith

May I recommend that you, also, read my editorial this month. Ed.

Dear Editor,

What your newspaper needs is more emphasis on women. At a school with 99.9% of its students male, what do you think the students are thinking of? The professor? The paper would at least give the guys something to read they are really interested in. A paper must be published to be read but if it never reaches the hands of the student it has no purpose. That is why I feel that the emphasis on women, or better yet, a girly article would better serve your paper.

N. W. Leathers

I agree that we need to place more emphasis on women. The emphasis you seem to be suggesting, however, is pretty well taken care of by Hugh Hefner and our feeble efforts would leave much to be desired. Anyway, I thought these guys were REALLY interested in engineering technology. Ed.

Dear Editor,

What is needed on the Southern Tech campus is a student center where the students can go after class hours to have a snack or lounge around.

When the new library is completed the old one could be made into a student center. Also, provisions could be made for the snack bar to remain open as long as the student center does. A juke box would be ideal in it and maybe some card tables. Since there are very few girls on campus, female visitors should be allowed. The responsibility of keeping order should be left up to the fraternities. This student center would be of great benefit to the students and also to Southern Tech. I truly wish something could be done about this.

Stanley A. Kordish

A student center would probably be ideal for STI. The library as a future possibility, however, is out. The bookstore plans to remodel the library into a larger facility for their place of business. Ed.

Dear Editor,

Being a freshman student of an age older than the average student, I would like to make a comment about the younger students. It upsets me to see younger students wasting their time here by not studying and just plain goofing off. If they only realized what a chance they have if they dig in and take advantage of their opportunity. I have often wished I could turn back the clock to my high school days, do better there and then have gone on to college. I'm sure it wouldn't have been quite as hard for me as it is now. In short, as long as the government will help by deferring students from the draft, they should meet them half way so they will be more prepared to contribute something to these United States.

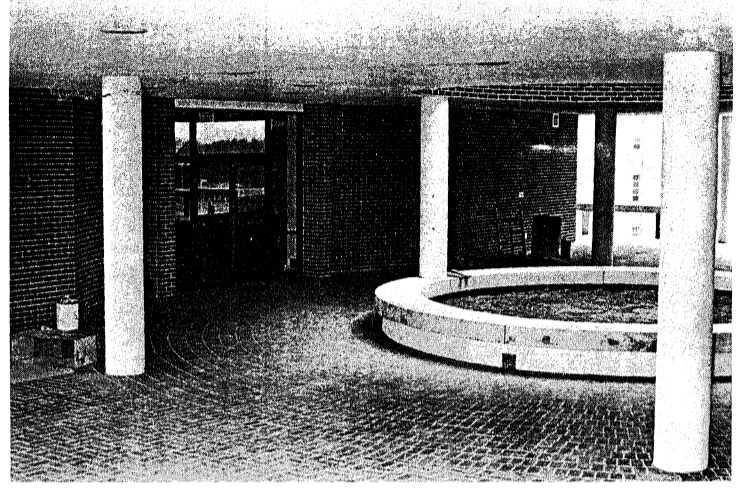

A Veteran

I wish that enough emphasis could be placed on this before the student enters college. By the time he learns his lesson though, it is usually too late. Ed.

FEATURE COLUMN

BID, BABY, BID

Jimmy Walraven

As it is the Engineering Technician's desire to bring you the important and noteworthy events that are occurring on the STI campus, I'm going to report this month on one of the favorite pastimes to be found at this school: playing cards in the snack bar. These friendly games occupy the time of many of our students, and these get-togethers over the card table encourage good fellowship, clean entertainment, fair play, spare time enjoyment, friendly arguments, unfriendly arguments, cussing, fights, riots, murders, and such like among the students here.

Just to give you an idea of what these games are like, I'm going to report on one of the poker games I participated in while cutting algebra last Friday. I'm gonna get real fancy with this and call the players North, South, East and West, just like in the professional bridge reports in the daily papers. Since there were five players, though, I'm going to call the odd player Southwest. Now to begin.

First hand. After the cards were dealt, North took three cards and bid five dollars, South took two and saw North's five, West looked at his cards, groaned, said a dirty word and passed, East passed, and Southwest fainted. South then raised five, North saw and raised one, Southwest regained consciousness and called, and North called Southwest a bonehead because he thought South was only bluffing, and bonehead got mad and quit.

When cards were shown North had five kings, West had three kings and East had a fit, pointing out the fact that any idiot knows that there ain't but five kings in a deck. Southwest called East a sore loser, calling attention to the fact that he had six kings himself, and wasn't

gonna lose that hand just because East wanted to play by the rules.

Next hand. North's deal. He blows it by throwing two or three cards off the table, and West calls misdeal. When cards are redealt, North takes three cards and bids two dollars, South takes three cards, sees, and raises thirty dollars, West looks at South kind of funny and folds, and East calls. When cards are shown, it turns out that West folded with five aces while South was only bluffing. North laughs hysterically and informs West that he is a dope and if he had any brains at all he would have called South's bluff and been in the money. West at this point panics and commits suicide, leaving North, East and South in the game.

When cards were being dealt for the next hand I happened to notice a man who had been quietly watching the illegal game. Curious, I threw a grilled cheese sandwich at him to attract his attention. "Hey, man," I said. "Ain't you a policeman?"

"Yeah. How did you guess?" "Oh, I don't know," I said. "I guess something about the badge and uniform and all made me suspicious. You gonna arrest us?"

"I was thinking about it," he replied.

Being in jail isn't really so bad; my cellmates and I got up a real good poker game, and the food reminds me a lot of Southern Tech.

BOOK REVIEW

Uris Stirs Intrigue In Topaz

Jimmy Walraven

Leon Uris, the "best-seller" novelist who has written the tremendously popular war novels *Battle Cry* and *Exodus*, has turned his hand to the modern theme of diplomatic intrigue and international spying—and the result is smashing.

Uris's new book, *Topaz*, is the fictitious story of the events and developments behind the Cuban missile crisis of 1962. The story sweeps its characters from the White House, to London, to Paris, to the top-secret Cuban missile sites in a swiftly-moving series of events that explode into the book's climax.

This book has all the elements of good reading: larger than life characters, a powerful plot, and an author who is a proven "master story teller". The book's content is a little more intriguing and perhaps a little more disturbing than the average novel because it is based on fact and it presents a story that might very well have had tragedy at its end.

Now high on the best-seller list, *Topaz* is a gripping account of the diplomatic happenings behind the international headlines, and seldom has a story been so consistently enthralling and more immensely readable. No doubt about it, Uris knows how to write a hard-hitting novel, and a noteworthy one too.

ENROLLMENT DOWN

The preliminary figures on total enrollment for the winter '68 quarter have been released and show a slight decline from the previous quarter.

This quarter, Southern Tech has an approximate total of 1046 students. This is a drop of around 115 from the fall '67

quarter when enrollment soared to 1215.

These figures show much gain over figures for other quarters. The Summer '67 showed only 422 students enrolled while the Spring '67 quarter had 971.

MOVIE REVIEW

**Burton
Rekindles
Chaucer's
Doctor
Faustus**

Meandering among the disciplines may be a commonplace nowadays, but the phenomenon of a Fullbright Fellow in philosophy simultaneously blossoming out as a principal player, with Richard Burton and Elizabeth Taylor, in a filming of Christopher Marlowe's "Doctor Faustus," is not precisely a dime-a-dozen occurrence.

The fellow who accomplished this unlikely, split-personality feat is Andreas Teuber, 24, late of Dobbs Ferry, N. Y., a graduate of Harvard in biochemistry as well as philosophy, who went on to Oxford for graduate study — and the new Columbia Picture.

While at Harvard, Andreas had acted in student productions "as an extracurricular thing, sort of like playing rugby in the afternoons," he recalled the other day. But at Oxford, he said, "I directed more and acted less, mainly because by American accent was unsuited for roles in the productions at the Oxford Playhouse."

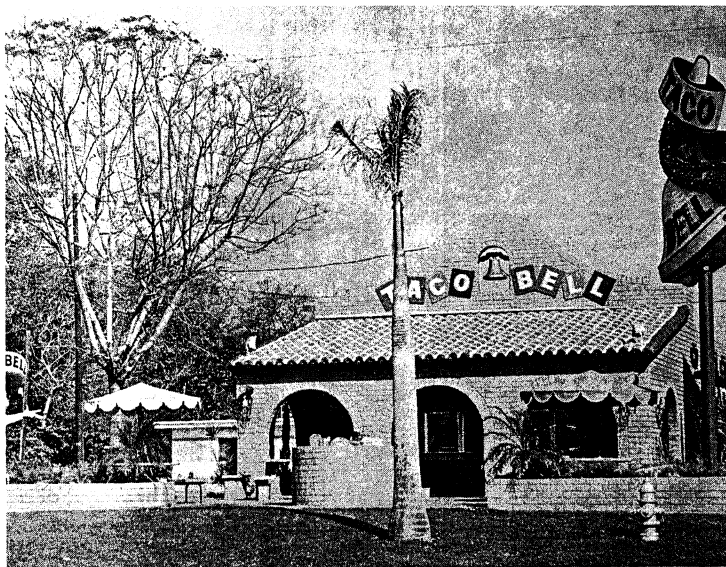

This is the theatre where Burton first performed while he was an undergraduate. And it was to raise funds for expansion of this theatre that the star agreed to appear, together with wife (in the role of Helen of Troy), in a stage production of the Marlowe classic. Teuber was chosen for the key role of Mephistophilis (antique spelling) who, as the Devil's agent, induces the elderly, scholarly Faustus (Burton) to sell his soul for renewed youth and the pleasures of the flesh. (Teuber, with assiduous effort, had meanwhile managed to do something about his State-side vowel sounds.) All the other 48 roles were filled by Oxford Dramatic Society members. About \$50,000 was realized.

Then Burton had the idea of filming the production.

Professor Nevill Coghill, who had directed the theatrical presentation, moving toward modernity ("Doctor Faustus" was written in 1616) from the subject of his own expertise (Caucer, 1340-1400), co-directed the film version with Burton, at the Dino De Laurentiis Studios in Rome.

**TACO BELL TO OPEN
MARIETTA BRANCH**

... One of First in Southeast
ADVERTISEMENT

A Typical Taco Bell Drive-in Restaurant

A franchise drive-in restaurant that serves authentic Mexican food is coming to the Marietta area soon. Construction is already under way on the Taco Bell restaurant, which will be located on Roswell Street, one half mile east of downtown Marietta.

James W. Hames and D. R. Glosson, the facility's developers, report that the target date for completion of the drive-in has been set at April 1.

"This may be a bit optimistic, however," Hames commented, "due to the unusual weather we've been having lately. In the past nine weeks we've had only 11 working days."

Hames and Glosson, well known Marietta businessmen, are partners in Westside Enterprises, Inc., the investment company which is developing the Taco Bell site. They estimate the cost, including the land, to be approximately \$125,000. Glosson's firm, the Glosson Construction Company, is the contractor.

"Taco Bell is the fastest growing chain in the quick-service food field," Hames said. "The Mexican specialty drive-ins are being opened throughout the country at the rate of three a week."

Recently the California based company expanded its franchise operations to Southeastern United States, opening regional offices in St. Petersburg, Florida.

"We are pleased to have Marietta chosen for one of the first Taco Bell sites in the Southeast," Hames said. "I've visited the only other Taco Bell in this vicinity, which is located in Atlanta, and I'd like to re-

port that Tacos are delicious."

Hames believes the residents of Marietta and surrounding areas will welcome a Mexican restaurant and will enjoy the unusual food. "A lot of the more than 25,000 people who work for Lockheed have come from California and other places where Mexican food is very popular," Hames reported.

The Taco Bell menu will consist of tacos, burritos, frijoles, tostadas, chili-burgers and soft drinks, all at reasonable prices.

"Taco Bell has discovered that the public has an almost insatiable appetite for Mexican food," Glosson commented. "Proof of this is the fact that the first franchise restaurant opened in California in 1965, and already there are nearly 230 units in operation in eight states. The company expects to have 1000 drive-ins operating throughout the nation by 1971."

The Marietta facility will be located a half block from the Cobb Exchange Bank, midway between downtown Marietta and the expressway.

"I'm particularly pleased with the site," Glosson remarked. "Restaurants have been slow to move into this rapidly developing area, and we need eating places to serve the lunch needs. Many employees of nearby businesses have already expressed an interest in the Taco Bell restaurant."

The drive-in covers approximately 16,000 square feet. When completed, the facility will be leased by Westside Enterprises to Taco Bell, who will then sub-lease it to the franchisee. The company installs all equipment and trains the employees in the art of Mexican cookery.

**GEORGIA "SENATOR"
VISITS STI
INTERVIEWS HELD**

During the week of February 4, 1968, Southern Tech's WSTB featured an open-mike talk with Mr. Donald Yow, Honorary Senator from Bleckley County. Technician representatives John Hamant and Willie Moore later conducted a candid interview with the Senator. Here are the highlights of their discussion.

HAMANT: Senator Yow, what are your views on the Georgia education budget?

YOW: The budget of the Regents of the University System of Georgia has been cut several million dollars. Instead of cutting the budget, we should allow more money. This will in turn bring into Georgia more qualified instructors and up the educational standings of our schools and permit a well rounded staff of teachers to build our leaders of tomorrow. Also, let me point out, with an increase in the educational budget, we can be assured that the teachers will remain in the state if we take a portion of the budget to raise the teachers pay so that they won't leave and go to greener grass.

MOORE: Senator, How much money would you consider to be a respectable raise?

YOW: I would say between 50 and 75 dollars per month.

MOORE: Senator Yow, what are your views on legalized gambling in Georgia?

YOW: I am in favor of parimutuel betting if the people of Georgia will accept it. Parimutuel betting will lead the way for more industries. And I can see where the taxes could be lowered. However, parimutuel betting will bring with it the underworld, but with strict law-enforcement this can be minimized and in time it could possibly be eradicated.

HAMANT: Senator, what about our foreign spending?

YOW: The United States Government has sent out over 150 billion dollars worth of gifts from the years 1945 to 1965 to 110 countries, some neutral, and some communist, yet we don't support the Communist Party.

MOORE: Senator, Tell me your opinion of the Blue Law.

YOW: Outdated! Neither the state, federal, nor the county governments should tell a man who he can and when he can or cannot serve. The government doesn't pay for a man's business.

MOORE: Senator Yow, do you feel that some religious sects are unjustly affected by the Sunday closing laws?

YOW: I firmly believe in separation of church and state. The Blue Law is out as far as I am concerned. If a man has a business of his own, it's up to him when he wants to open.

MOORE: Senator, while we're here in the state, what do you think of some of the counties having alcoholic beverages controlled?

YOW: I think all counties should be wet. If a man drinks alcoholic beverages, he's going to drink regardless if he has to go twenty miles for a cocktail or not. An example of the danger of what might happen can be seen if a man does drive twenty miles to buy a bottle of alcohol and drinks it there in fear of his wife or children seeing him, and tries to drive the twenty miles back.

HAMANT: Senator Yow, its been a long time. What do you

think of the draft law?

YOW: I believe every man has the responsibility to his country and family to uphold its safety and obligations. However, I cannot see sending American men to Viet Nam to play house.

HAMANT: Senator, what do you think should be done?

YOW: Take the war in Viet Nam out of politics and out of the presence of the White House, and leave the fighting to the generals to win the war and bring our men home.

HAMANT: Senator, what is your opinion of those who burn their draft cards?

YOW: Send them to Viet Nam where they can do some good!

HAMANT: Senator, is Canada right by giving refuge to those who run from the draft or should we make a deal?

YOW: No! Canada is a separate sovereignty. I think these persons should no longer be American citizens if they can enjoy the countries freedoms by sitting on their royal gluteus maximus.

MOORE: Senator, what do you think of Georgia's present status?

YOW: If I had to spend another four years in Georgia like I'm spending these four now, I'd rather go to Australia. The church should not enter into state affairs. I don't think Gov. Maddox knows what he's doing. However, there is one thing good about him; he's not letting any of his personal prejudices overpower him.

HAMANT: Senator Yow, how do you like the new Governor's mansion?

YOW: It's a good place to ride a bicycle!

EDITOR'S NOTE: Donald Yow was "elected" while a law student at Middle Georgia College. It was in a straw poll for "Senator" from Bleckley, and his opponent was a local disc jockey.

THE ONE MARRIAGE

The World On Trial

Willie Moore

There are two marriages if there is any marriage at all. There is the marriage of man which is a fraudulent, and distorted institution which licenses a couple in contract to remain together due to the social pressures society places on them, because of their greed and seek for vulgar pleasures, and because of their ill-will to misuse life itself. This marriage is only a curve or boundary which man has set up to control his passion for bliss and enjoyment of hurting others.

This kind of marriage stinks and reeks the incense of fresh snake's venom, but poisonous and effective. It is truly poisonous and effective because it explains to man what he can and can not do, thereby in some cases making it functional and meaningful. But, because it is meaningful to man, and because it helps man to live together in peace, this evidence alone cannot be entered as the proof of the real meaning of marriage and love, or the truth.

And there is the other marriage which is immaculate and sincere. This marriage is not selfish and everything is shared. It involves the true union of backgrounds and emotional feelings about almost every phase of life. It is always stimulating and serene, and yet never forceful in any way. This marriage harmonizes sweat in conjunction with spiritual companionship. It is surely something one cannot touch, and is surely not a paper, a paper which connects two people like slaves bound in chains at the feet and in handcuffs at the wrist. But rather, a marriage which is honest to one's self and to the other, clean, and healthy. This marriage is the marriage of God, and it has no seal other than pure love.

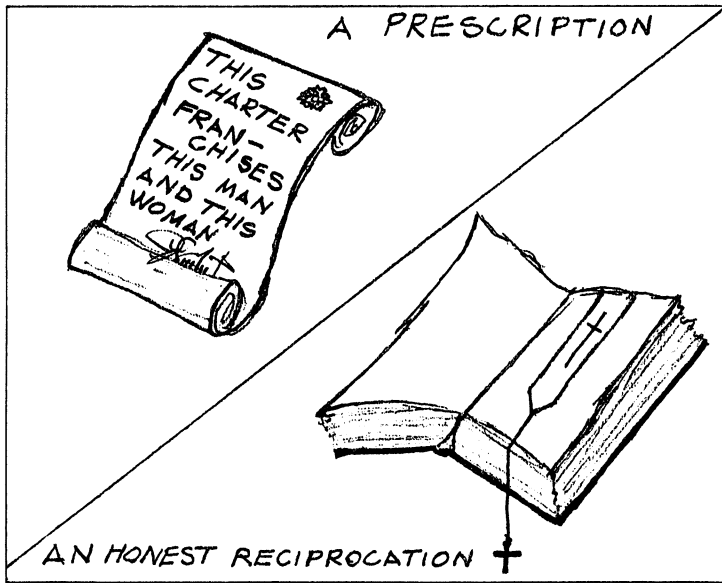

It is now, that I subpoena the world to appear in trial in this paper on the charges of profanation and deception of the real marriage. I shall attempt to point out and prove: (1) that man is foolish, selfish, and lusts for pleasures, (2) that man is animal and has inborn characteristics, (3) that man is mis-formed of the meaning of true marriage, (4) that marriage by law alone is only a law, (5) that marriage is spiritual and intangible, (6) that marriage is so infinite, only God can recognize it and (7) that pure love is marriage.

You, the public and the readers of this paper, are the defendant, second jury, and the second judge; and I, the second plaintiff.

Philosophers have tried to define man since the beginning of time. But due to man's complexities, philosophers have merely defined man or formulated a definition of man by using synonyms. However, in all primitive societies, yet civilized, including our own, man has installed the marriage ceremony within the institution of marriage as a part of his culture.

We must realize, however, that the wisdom of man's mind and his actions of today are of a primitive nature, as it was only a hundred years ago, and years before then. We must also realize that one of man's purposes for existing is to cultivate a more intellectual and blissful tomorrow, which emminates a man of richer knowledge. A man who can think soundly and deal sagaciously with facts, has the capacity to create and make use of laws, to understand himself more; and is equally as well, a man who can respect the philosophies, ideas, and beliefs of others, whether he believes in these beliefs or not, or whether these are of his own race or of a race of people he has never heard of nor seen.

But man has always been a fool. He has always thought of himself as the center of the universe. Man, however, was not a fool when he denied the fact that the earth revolves around the sun. But he was a stupid, archaic, imbecile when he deliberately closed his mind to this fact because he had been disciplined in an egotistical, selfish, innate chamber which dictated to him the

... And There is The Other Marriage ...

feeling that he was the core of reality. Moreover, a core which he thought was always surrounded by sin.

Again, man showed us his rawness when he rejected God. He preferred to wallow in the pleasure-seeking, emerged depths of the pagan gods to satisfy his bounty and fleshly intent with sex, wine, food, and murder. He lusted to thrive in sin; murdered to live in treason, malice, and infamy. But like history, when man saw the truth, love, and understanding of God, he changed some of his ways and dropped some of his ideas about the impure, golden gods, which in time only became myths.

I cannot condemn man for not accepting the principle that the world revolves around the sun, that God is the only and true Deity, and that marriage is more than a law and a physical bond. I cannot fully condemn man because he was ignorant of the truth. However, I do condemn man for using ignorance to battle against the truth for selfish reasons. Never-the-less, the truth lowered man; he was not at the center of interest. The truth took away his feeling of security, took away his lust for pleasures and curved his life. But man has taken the truth, the meaning of marriage, and curved the curve, and in so doing erected a scope in his life bounded not by myths, practically by lies, but by the fears of what he is and how savage and destructive he can be.

Man has taken God, the meaning of truth, Marriage, and has used Him as a subordinate; but only until his own hide is against the whips stroke. Man has twisted God's words in saying that: God didn't intend for man to fly in an airplane. God didn't intend for man to go to the moon. Man is playing the role of God when he transplants the human heart. It is to my knowledge that none of these sayings can be found in the Scriptures.

The truth is good; it separates the real from the non-real. The curve that man has set up to protect himself against his fellow man is good, meaningful, but only if it carries the knowledge of the truth hand in hand with it. But man has deceived himself so long that even today we see the anti-body of the truthful curve which labors for man's "own", "Individual", "selfish", "because I can get what I want", mis-doings.

Unhonorable, pitifully, man has made mistakes, is now making mistakes, and shall make mistakes in the future, unless he matures and begins to understand himself more and really and truly love God in his heart, and furthermore believe that real marriage is really a spiritual, genuine closeness and not a financial, sexual, security tie governed only by man's law warranted in his opinion to fuse two people together to live a cut-throat life.

Indeed, we must agree with the philosophers and their definition, that man is an animal—no more, no less. Needless to say, the only difference in man and the "said to be lower animals", is that man has the ability to think and reason, and that he can communicate and teach his offspring. The rest of man is like the rest of the animals. They both have needs and drives; however, it might only be a difference in the way and the time they fulfill these needs and drives which do exist in both of them.

The male part of man is the aggressor. By nature he desires to plunge the valleys to generate a raptured, quiet, sigh in every female. The male part seeks, intices, and seduces his mate. The male part of man can be stimulated by the mere sight of a female—and he's greedy, wants to take and have all females, and he'll kill to get them.

The female part of man is instinctively different and moreover the opposite. The female admires the male for his cunningness, but temporarily initiates the play to test the male, then further baits him if she likes his individuality and uniqueness. But basically, the female is the passive. Her main ambition is not to pleasure every male she sees, but to become a dedicated mother.

In conjunction to this, it can be said that because of the environmental factors, teachings, morals, and ethics of the so-many-different cultures, the roles of the male and the female may be found changed or interwoven. But as nature speaks to us, as we see nature as it is without the pressures of society, the male dominates life.

However, if we openly look at marriage in this light, we may witness that man is foolish, that he breeds on pleasure, that the male as well as the female are a part of man, that the male is like the lion, seeks a mate to capture, and the female is like the lioness, the mother of his offspring and mainly the male is the opposite of the female. Knitting this into actual reality, we do admit that the male uses the male and the female uses the female to unite themselves with the opposite sex, or for their own purposes, that the female may be overly aggressive and a tramp, and that the male does rape—all for the sake of pleasure, all for the enjoyment of getting back at others, all for the sake of love.

But real love in marriage is never destructive. Love is always constructive. If by example, a female enjoyed sex and this alone cultivated the feeling of attachment, then she is not in love she is only pleased. If, by example, a male slaps a female in private for flirting with another only because he is jealous, then he is not in love.

Man has changed words and their meanings to fit their own needs and to rationalize their own actions. Pleasure and jealousy and factors

which make up love, but neither can stand alone or inseparable of the other to form true love or marriage.

When Romeo found Juliet apparently dead then killed himself, he was not in love. When a man found his wife committing adultery and killed them both, he was not in love. Romeo and the heart-broken husband were not in love; they were beyond love in a sinful, romantic state of shock, my term, wasted. Man has apparently screwed the truth in marriage and love so that he may again have the right to destroy, so that he may again have the right to get back for the loss of pleasure, so that it can all be said "it was for the sake of love". But love to Romeo and the husband was not temperant. Love to them was not painful. Love to them was egotistical, self-centered and selfish. Had Romeo not been caught up in what he wanted so desperately and taken his life, he and Juliet might have lived a happy life.

Our primitive society, yet civilized, needs to mature so that man can live together without the fear of fighting and so that there will be no need to make marriage a legal proposition or law to aid man from acting like an unprepared child. But primitive or not, society has witnessed man's snobbish and gory make-up, and in turn decided to install a law and a marriage ceremony to inform the public before the legal marriage, in man's opinion, begins—pressuring man to curve his innate nature, and to introduce God, for those who believe in Him, as the backbone of the marriage, so that each party can deliberately and freely claim the other party as their own, in order to deter man from fighting and killing for someone or someone else they want merely out of lust and sexual desire. The barbaric cave man fought and killed; the ancient Romans drank and cursed; the American Indians torched and scalped; the American Negro lied and stole; and the American white enslaved and exploited—all for the psychological and social desires for pleasure.

Although the latter of these things are still happening today, man is seriously trying to form this man of richer knowledge. But man has a struggle. Man is struggling within himself to carry on the human race, while he so savagely pleads to wallow in sin. Unfortunately, man hates to lose these social and psychological pleasures, mainly because they are innate and were taught, because he enjoys them, and because his mental act of mis-doing is far more rewarding than his physical participation—and all of this is why it's hard for man to love and really be engaged in real marriage.

In reality the legalizing of a man-made marriage, and the marriage ceremony for sentimental factors to the female is a curve. The legalizing

of a man made marriage forces man to obey God's law, as well as man's law, but this kind of marriage cannot force the heart to love.

Now let us be honest. We know that many couples are married, in man's opinion, because of sex, money, and because they think they are in love. But all of this is not the real meaning of marriage.

How can man dictate to God when a couple is married, in man's opinion, because a law sublimates man's drives, when only God knows the intent of man's heart and the sincerity of man's words. Only the Divine sees all, for the pledge by word of mouth is not enough since the background and make-up of man can only be weighed by God.

However, since people are complex, the definition of pure love is infinite. For every emotional thought which is clean and Godly is love. Love on a small scale is giving time, devoting part of your life to what you believe; desire, the want; respect, the reverence or regard; moderate jealousy, the idea of keeping; considerate, patience and compromising; sharing knowledge, understanding each other's backgrounds and cultures; faith, belief in God. On a simple stage love has three phases. The first stage is the infatuation stage. This stage draws the two people together because they are of the opposite sex and have a mutual liking for each other. The second stage is the spiritual stage. This stage unites the two in sharing backgrounds and their faiths. The third stage is a passion stage. This stage caps love at its highest point by entering sex. Pure love is more infinite than described, but with the above, one is on the road to the real marriage. This marriage in the eyes of God is breathless, natural, and intangible. Let it be said that Pre-marital and Extra-marital sex are words having no meaning in God's marriage, for He witnesses man's loyalty and weds the two in marriage before sex is entered and he, knowing all, sees through man and knows that the couple's souls are one and cannot be separated to commit adultery.

However, if man is married in the eyes of God, then he is married in the eyes of man. And man's curve is not a fraudulent, distorted institution, but a worth-while house built in culture upon the foundation of reality.

Your Honor, ladies and gentlemen of the jury, the prosecution rests and invites the defense to cross-examine.

BASKETBALL SEASON ENDS; TENNIS OUTLOOK GOOD

The last two points of the home basketball games were honored by an overwhelming crowd on February 12, when the STI Hornets bruised Young Harris in a well executed game by a score of 80 to 67.

This score was probably geared and promoted due to Gainesville's nasty, undercovered, sly way of winning at home. However, Gainesville Junior College slammed the door of hospitality in our face by beating us with a cruel score of 83 to 60. Needless to say, we just as lovingly transposed the hurt by slapping the faces of Georgia Military with a 126 to 71 score; Middle Georgia with 108 to 92, and Young Harris—all three in a row.

Basketball coach, Harry Lockhart said that he was pleased with the overall participation of the student body, and that he would like to see just as many students support other athletic activities.

"STI's tennis team shall be stronger this year", says Larry Parlett, tennis coach. "Out of the twelve matches this season, our most stiff competition is probably Abraham Baldwin of Tifton; however, there is no doubt that we want go to the state tournament at Georgia Southern, in Statesboro."

According to Coach Parlett, the tennis team will start the season off with a week of practice training in south Georgia, probably Thomasville, during Spring Recess. He mentioned, however, that if . . . the weather were not suitable for practice, they would most likely move to Florida.

Each match of the season will consist of six singles and three doubles. A single is considered as the best two out of three set games and the double, the best two out of three individual team (two players) set games. Coach Parlett says that with good team coordination, speed, alertness, and competitive spirit, we can come out on top and have an excellent season.

SKYDIVING IS NEW STI SPORT

Skydiving is a sport which is enjoyed all over the world. And recently some of the STI students have joined the world by showing their interest and enthusiasm in participating in the daring, but safe sport. However, since the beginning of the club, there have been two meetings and within these two consecutive weeks, twenty students have joined with the desire to employ the art of sport parachuting.

According to Steve Wright, a member of the club, the Skydiving Club is now in the process of being chartered by the Student Council in hopes that they will receive the right to use the title, Southern Tech, as part of their organization's name. This, however, depends if the Student Council recognizes the Skydiving Club as an organization with a stable membership and strong by-laws.

Several of the club members have already jumped before, and presently two students, Bill Malpass and Vick Jones have secured their sport parachuting and jumping apparel.

Meetings and classes are held every Wednesday evening at 8:00, and they are now beginning ground school training on the proper techniques of the sport. In addition to their training, the Skydiving Club will compete with other parachuting teams at other schools. Moreover they have already scheduled club trip to Chattanooga.

The scoring of the events will be based on precision in free-fall, and the accuracy of maneuvering the parachute to a designated target.

February's Miss Technician is Shirley Diane Stephens of Atlanta. Shirley attended Walter F. George High School and is interested in studying cosmetology. Her main hobby and much of her attention is aimed at music.

STI Bowlers Seek Additional Members

The independent bowling team of STI is moving toward further progress. The team is composed of students who gather every Monday night to enjoy the art of good bowling and to enlighten the academic year with a little entertainment. The league is self motivated and is governed by set rules and regulations initiated by democratic procedures. The league also plays under the handicap system and awards its own members with trophies for highest average, highest series, and highest game.

Members of the league include: Jerry McGee, Edsel Copeland, James Brown, Rodney Dalton, Ray Sanford, Daryl Vaughn, Harold Linnenkohl, George Bradfield, Chuck Peterson, William Evans, Harry Copeland (secretary), Fred Odom, Warren Kelly, Robert Corey.

Leading for individual team trophies are: Linnenkohl, Bradfield, and Peterson. Leading for highest average is Bradfield; highest series, Linnenkohl; highest game, Dalton.

Membership to the organization is open at the beginning of each quarter. And each member pledges to uphold the league's rules and to carry himself as an honorable character at all times.
